

On the safe side.

Presenting DEKRA Equipment Maximization Tracker (EMT)™:

A Powerful Maintenance Tracking App

DEKRA Equipment Maximization Tracker™ helps boost profits by reducing downtime.

If auto repair shops want to maintain profitability, it's critical to avoid unplanned lift-bay downtime. A typical shop disruption can cost between \$1,000 and \$2,000 in lost billable time—not including equipment repair costs and the potential drop in customer satisfaction. With DEKRA's Equipment Maximization Tracker, collision centers can proactively manage key equipment maintenance activities, resulting in less downtime and increased profitability.

DEKRA EMT is a convenient app that allows you to stay a step ahead of equipment maintenance issues and avoid equipment breakdowns. This cutting-edge solution tracks and documents key equipment maintenance and performance issues. DEKRA EMT sends reminders when maintenance checks are due, tracks action items and completion status, stores data and images and much more. With all the maintenance info you need at your fingertips, this valuable app offers peace of mind and enhanced safety.

Discover the DEKRA Difference

A trusted name in safety since 1925, DEKRA specializes in testing, inspection and certification. Globally, we employ 43,000 people in more than 56 countries, and our clients include the world's largest auto manufacturers. We've enjoyed a strong partnership with German and European OE collision programs in North America since 2014. Our mission is to drive safety at work, at home and on the road.
